

CALL FOR WORKSHOPS AT THE 9TH ICAT

The primary goal for the development of Appropriate Technology, as declared by the International Network on Appropriate Technology (INAT), is to direct science and technology to work toward worldwide egalitarianism where all people have equal access to resources that meet basic needs. To enhance the quality of the 9th ICAT, we are staging a number of related workshops.

This call is an opportunity to submit your proposal to conduct a workshop during, before or directly following the conference. Please submit an abstract of 100-400 words explaining your workshop, time and space required, anticipated audience and any support requirements. Indicate all costs involved and how this will be handled. All selected workshops will be advertised in advance on our website. Workshop organisers are encouraged to solicit participants for their workshops through their own connections.

Workshops will be held during the conference, the day before and the day after the conference. The purpose of the workshops is to provide participants with a more in-depth experience of the particular technologies presented during the conference, and to promote Appropriate Technology as a relevant field for technology developers.

THE EXHIBITION CATEGORIES ARE:

- Green Economy and Innovation
- Energy and Materials
- Water and Sanitation
- Education
- Environment and Agriculture
- Job Creation
- Health
- Service Industry
- Cities and Space
